

various TODO items:

- Everyone
 - read theory docs in DevNotes/larnder/2020-03-05
- Jerome, Hoang Anh:
 - Dump to CSV
 - abandon rotation issues for now: track down cost function problem
 - visualize TF progress on cost function
 - do this eg for every 10th time step
 - at first, just cost function, without TF behaviour
 - website?
- Justin, Adamo
 - calligraphic rendering
 - manual calligraphy on paper, photos of
 - font?
 - regression method: show layout of phone documented?

Work done during spring break

- Chris
 - develop CostFunction_rotation documentation and calculations
 - develop CostFunction radial problem calculations
 - worked on code to debug: ruled out problems with TF: problems in our main cost function
 - created MultiPlotterNew: improved interface
 - features: no need to declare the total number of plots: just add as needed.
 - binding of an array as a signal to plot can be done once at array declaration.
- Jerome
 - refactor some of the Simulate.py code
- Hoang Anh
 - captions and layout for MultiPlotter, CSV dump
